SECURE CODING

LAB 1

Ritvik Pandillapally

19BCN7117

Explanation

We use cd directory to go to a specific location on the system.

We use the cd.. directory to go to the root folder of the present folder.

I used the "mkdir foldername" command to create folders.

I used the "Notepad filename.txt" command to create the text file.

I used the "del   /S foldername/*" command to delete all the files in a folder

I used the "del   /S foldername/*.TXT" command to delete only the text files in a folder
